A step forward to the history: Cambiare

With the advent of streaming audio products in the home- and church organ world, of which Hauptwerk is the most famous application, starts a new era for organists. With a great degree of flexibility the (home) organist now have the authentic sound of a wide range of (historical) church organs available. Each organ with its own character, disposition and spatial sound experience. The Content CAMBIARE-series brings the authenticity and the grandeur of small and large church organs home and to life!

Ready for the future

Content organs started a new trend with the new CAMBIARE series. This organ series brings the ultimate sound experience of the used sample sets on an inimitable way to life. Our unique audio system ensures an unrivalled sound experience that attracts each organist to the utmost. The furnishings are contemporary and practical, the operation of the organs is intuitive and very user friendly. The audio system can be delivered with internal and external speakers.

The ultimate distinctive feature of a Hauptwerk organ is the quality of the sound which it produces. After all, the sound determines the experience of the organist and the listener. With the introduction of the Content CAMBIARE-series, the presentation of our newly developed audio system became reality. To guarantee the ultimate audio experience, a proprietary and dedicated audio protocol has been developed based on I2S technology. This protocol avoids the use of sound cards in the PC and results in an unprecedented high sound output, which offers a great deal of transparency to the original and natural organ sound.

We offer an audio system that respects all facets and details of the organ sound and can be adapted to the characteristics of the room in which the organ should function.

The contemporary design of the consoles meets the high quality standards of Content. A modern design within which all functions of the instrument are presented and available to the organist in a pleasant way. The use of touch screens for the disposition and other functions, such as loading a sample set, setting and adjustment of tunings, volume control etcetera.

An organ of the Content CAMBIARE series 'keeps up' with future developments in technology. The Hauptwerk PC forms the heart of the instrument. This offers great opportunities in terms of flexibility of use of the instrument. Updates and installation of new sample sets can easily be performed via an internet connection.

In addition to producing your own organ music, the same audio system also functions as a device for other audio sound applications on high-end level.
